<b>Appendix A21.1: Record of Stages 1 and 2 of the CEA</b> .....	<b>1</b>
1.1 Introduction.....	1
1.2 Shortlisting notes .....	19

## **Appendix A21.1: Record of Stages 1 and 2 of the Cumulative Effects Assessment**

### **1.1 Introduction**

This appendix provides a record of the outcomes of Stage 1 and 2 of the CEA. At Stage 1 a preliminary long list of other projects was reviewed and distances from the Proposed Scheme mapped against zones of influence (Zol) for different topics used in the EIAR. Projects which fell within a Zol for topic were included as part of the long list for review at Stage 2. Some projects were kept on the long list for further consideration at Stage 2 even if they were outside of the Zol if the topic specialist felt there was a potential pathway to likely significant cumulative impacts with the scheme.

At Stage 2 topic specialists considered each project on the long list further in relation to whether there were likely significant effects for further consideration. If it was considered there could be likely significant cumulative impacts, the project was shortlisted for further information gathering (Stage 3) and assessment (Stage 4).

The assessments are provided in Appendix A21.2 of this EIAR.

Where relevant a reference to a sifting note is included to explain the decision as to whether or not a project was shortlisted. Sifting notes are included in Section 1.2.

Table 1: Stages 1 and 2 Shortlisting of Projects for CEA

## 1.2 Shortlisting notes

1. Individual local planning applications have not been specifically identified and assessed by the Biodiversity topic. Instead the cumulative impacts assessment has considered the general pattern of development pressure and how this contributes to habitat loss and fragmentation.
2. This project was not considered to have a likely significant cumulative impact on any relevant aspect of population health.
3. This project was not considered to have a likely significant cumulative impact on relevant water receptors.
4. The Proposed Scheme is not predicted to have any likely significant residual impacts on land, soils, geology or hydrogeology and therefore there is no potential cumulative impact with this project.
5. The Proposed Scheme is not predicted to have any likely significant residual impacts on archaeology or cultural heritage and therefore there is no potential cumulative impact with this project.
6. This project was not considered to have a likely significant cumulative impact on architectural heritage.
7. Although this project is outside of the Human Health study area for the Proposed Scheme in isolation, it has the effect of extending the potential area of influence on the population within the Proposed Scheme study area by linking communities by a project of a similar nature. The cumulative impact of the projects in combination was therefore deemed relevant.
8. Strategic Housing Developments (SHDs) – SHDs have not been specifically identified by Biodiversity topic. They are relevant for Biodiversity cumulative impacts assessment if within same water catchment as Proposed Scheme, or within close proximity for in-combination disturbance on fauna and habitat loss. See Figure 21.1.
9. This development is not expected to have likely significant cumulative landscape and townscape effects due to distance.
10. This has been scoped in for Human Health and Material Assets, despite being outside of the study areas, to capture potential cumulative effects of the BusConnects Core Bus Corridor Schemes, which are of a similar nature and therefore in combination could have likely significant cumulative effects in relation to specific health or material assets impacts.
